

Practical 1: Pseudo Code and Flowchart

Title:	Pseudo code and flowchart for Greatest of Three Numbers and Sum of N Numbers
Environment:	Turbo C
Date:	July 30, 2026

Part A: Greatest of Three Numbers

Problem Statement

Design an algorithm using pseudo code and a flowchart to determine the maximum among three user-provided numbers.

Algorithm / Pseudo Code

1. Start
2. Input: Read three numerical values: A, B, and C.
3. Condition Check:
 - If $A > B$ and $A > C$, then A is the greatest.
 - Else if $B > C$, then B is the greatest.
 - Else, C is the greatest.
4. Output: Display the greatest number.
5. Stop

Flowchart

Below is the visual representation of the flowchart logic for Part A:

Flowchart A: Greatest of Three Numbers

Part B: Sum of N Numbers

Problem Statement

Design an algorithm using pseudo code and a flowchart to compute the cumulative sum of the first N natural numbers.

Algorithm / Pseudo Code

1. Start
2. Input: Read the positive integer limit N.
3. Initialization:
 - Set sum = 0
 - Set loop counter i = 1
4. Loop Condition:
 - While i <= N:
 - Update sum = sum + i
 - Increment i = i + 1
5. Output: Display sum.
6. Stop

Flowchart

Below is the visual representation of the flowchart logic for Part B:

Flowchart B: Sum of First N Numbers
